# Find the right opportunity, at the right moment

---

Meet **Sarah**.

Sarah is an **Account Manager** in **Orange Business**, currently covering the **Public Sector**.

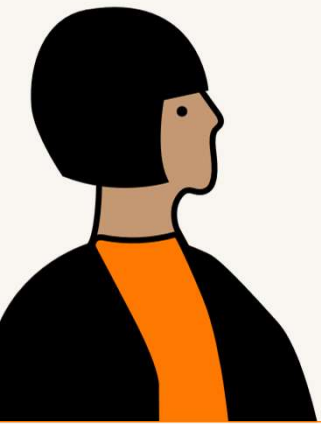

Tomorrow Sarah is meeting the **CIO** from a **large government agency**.

Sarah has a lot of meetings today, and very little time to present :

- a set of the **most relevant Opportunity Spaces** for the client;
- that must be **hot right now**, with clear evidence of **why**;
- that Orange and the client **can actually win**.

**Sarah can't dig through hundreds of articles and scattered information.**

**And she shouldn't have to.**

# The Innovation Radar

One tool  
turns **scattered external signals** into a list of  
**clear, actionable Opportunity Spaces**.

For Sarah, this means:

## What?

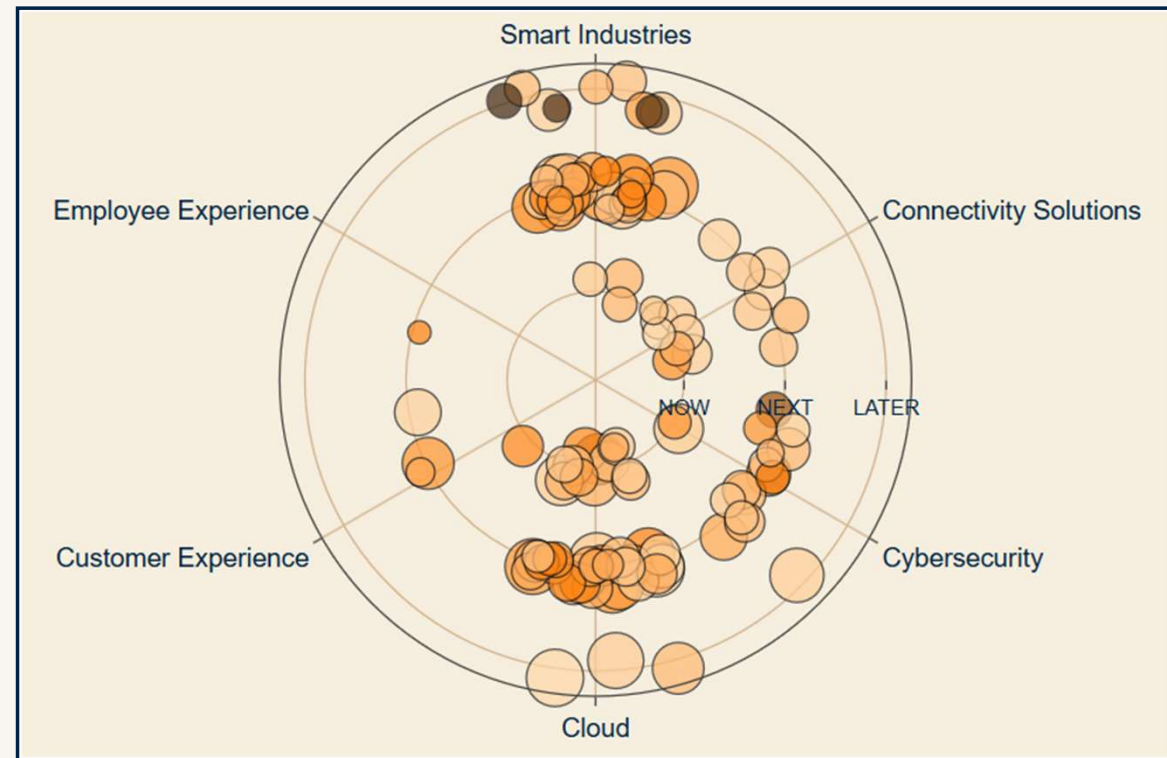

The **most relevant Opportunity Spaces** specifically for the client, ranked by **Attractiveness**.

## Why now?

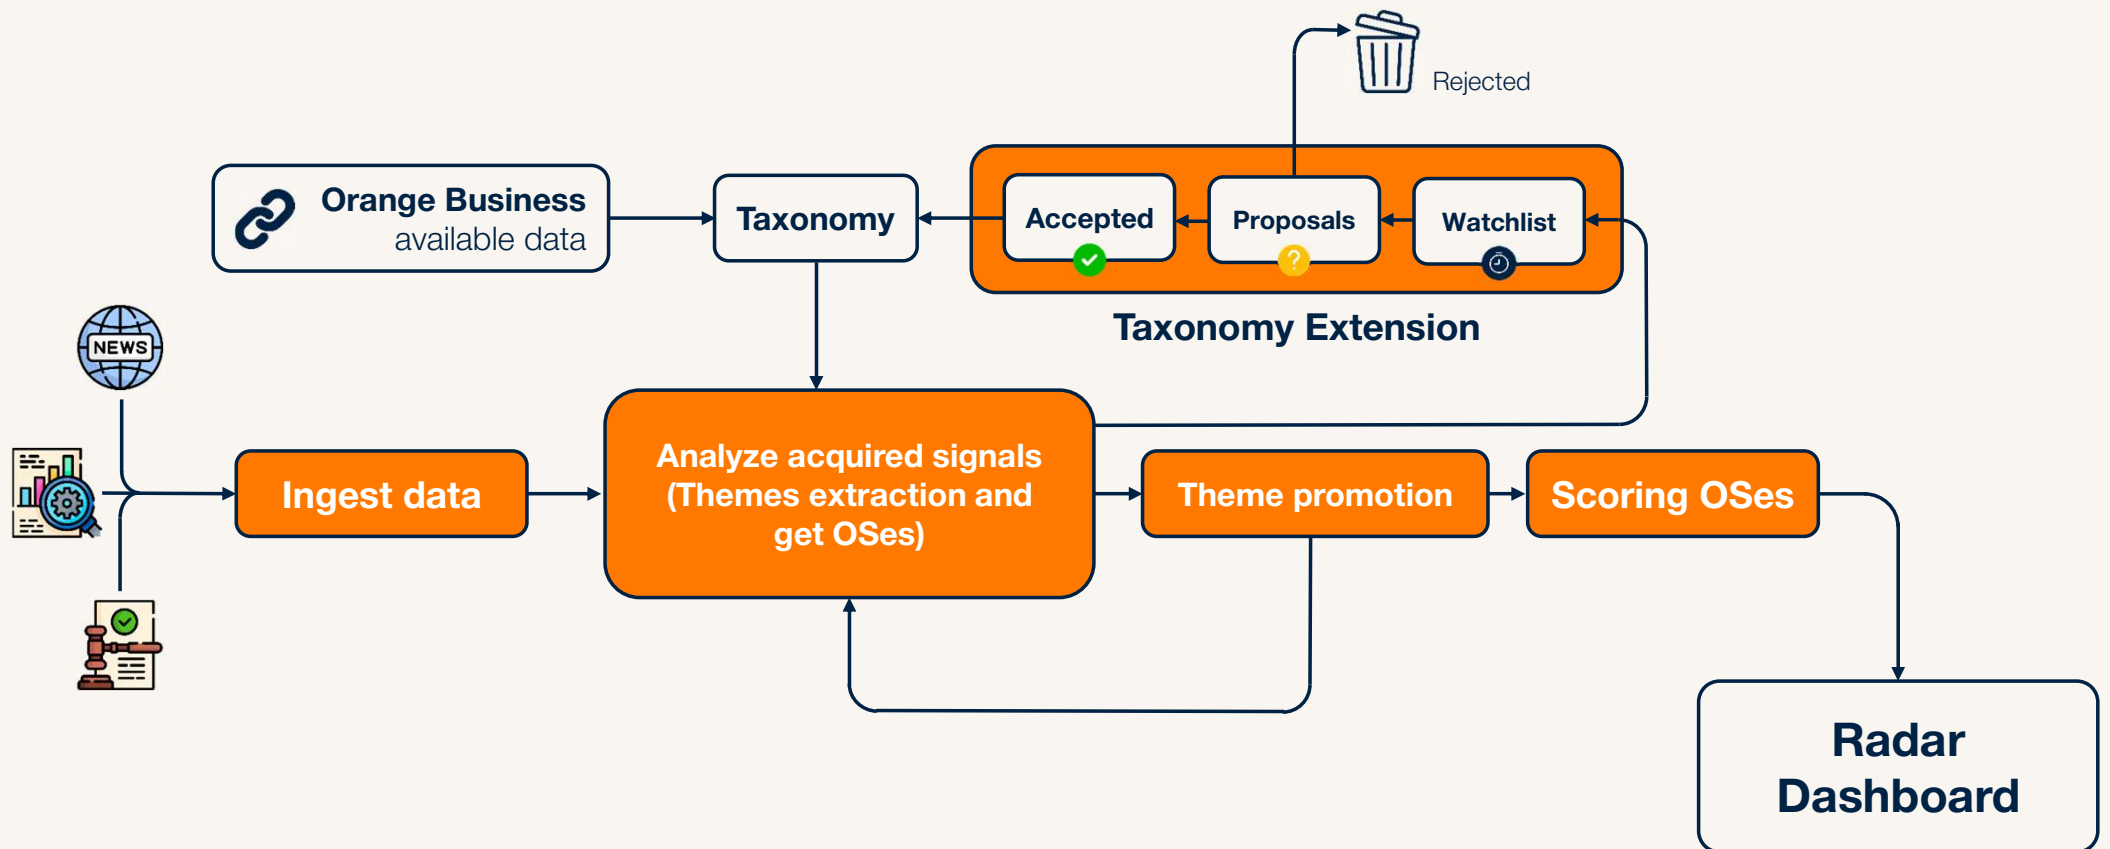

Each one of them comes with a **clear explanation of the linked market signals** and their **Urgency**.

## Can we win?

Each OS has a **Right-to-Win** score, grounded in **Orange's actual assets and references**.

# What is actually behind it

# Scoring logic

Each opportunity space is evaluated along **two independent axes**: market **Attractiveness** and the strength of our position to win, **Right-to-Win**.

## Attractiveness (0/10)

**Weighted average** of 5 factors, of which 3 are **deterministic**, calculated from data (Market signal strength, Source diversity, Novelty/Momentum), and 2 are **evaluated by the LLM** (Evidence quality, Strategic relevance).

**R2W** (0-10 + L0/4)

**LLM classifies each opportunity based on its distance from the current portfolio.**

- L0** – Direct offer (an Orange asset already exists)
- L1** – Bundle (two or more existing assets to be combined)
- L2** – Partner-dependent (requires an external partner)
- L3** – Adjacent (a capability remains to be developed)
- L4** – White space (no path from the current portfolio)

**Regulation**: full force, without expiration (a law remains in effect even if old)

**Tenders**: weight that decreases over time (an expired tender is no longer urgent)

**Novelty**: it also contributes to urgency, not just attractiveness.)

**Urgency** (0/10)

|                        |     |                                                                                                       |
|------------------------|-----|-------------------------------------------------------------------------------------------------------|
| Market signal strength | 30% | How many signals are connected to this OS (volume), scaled to a calibrated cap - <i>deterministic</i> |
| Source diversity       | 20% | How many different sources discuss this topic - <i>deterministic</i>                                  |
| Novelty/Momentum       | 25% | Scores how recent and clustered the signals are, based on their published date - <i>deterministic</i> |
| Evidence quality       | 10% | The LLM evaluates the credibility and specificity of the sources.                                     |
| Strategic relevance    | 15% | LLM-assessed fit with Orange strategy (assets catalog value proportions, analyst recognition).        |

# Key features that make this tool unique

---

## Token handling

In case of **quota exhaustion**, turns automatically to next key.  
Possibility to **restart run from last** executed operation.

## Adaptive taxonomy

Predefined **taxonomy set**, can be **extended** after manual approval.

## Automatic score re-computation

**Old scores are recomputed** after a specified delay.  
**Urgency can shift with time** and population move.

## Grounded scoring

Right-to-win and Strategic relevance **scores are based on Orange Business's real catalog and customers references.**

## What's Hot Now

**OS023** — Public Sector × Digital Infrastructure × Cloud

Attractiveness: 9.08/10

R2W: 10.00/10

*API Evolution Platform (Network as a Service) aligns with the public sector digital infrastructure domain, extending Orange Business's SD-WAN, SASE, and cloud connectivity capabilities, which is a key differentiator in the Gartner Magic Quadrant for Global WAN Services. Maps to Orange's 'Secure Cloud Orchestration' value proposition.*

**OS028** — Public Sector × Digital Infrastructure × Cloud Data Platform

Attractiveness: 8.87/10

R2W: 9.20/10

*The public sector cloud data platform aligns with API Cloud Avenue (Cloud) as a direct cloud service offering, though it is a broader data platform than the generic cloud API. Maps to Orange's 'Secure Cloud Orchestration' value proposition.*

**OS020** — Public Sector × Cloud Infrastructure Modernization × Cloud

Attractiveness: 8.78/10

R2W: 9.40/10

*API Cloud Avenue (Cloud) offers cloud infrastructure modernization services, specifically through its Evolution Platform (Network as a Service), which combines SD-WAN, SASE, and cloud connectivity. Maps to Orange's 'Secure Cloud Orchestration' value proposition.*

Role: **Sales**

Vertical: **Public Sector**

Persona: **CIOs**

## OS028 — Public Sector × Digital Infrastructure × Cloud Data Platform

Domain: Cloud · Horizon: Next · Role: Sales · Buyer persona: CIOs · Geography: Benelux (Netherlands, Belgium, Luxembourg), Germany (Germany), DACH (Switzerland, Austria)

| Attractiveness | Right to win        | Urgency <span>?</span> |
|----------------|---------------------|------------------------|
| 8.9/10         | 9.2/10              | 7.9/10                 |
|                | <span>↑ [L1]</span> |                        |

### Do this next — Sales

Contact the identified CIO to schedule an exploratory meeting about Orange's sovereign cloud offering for government data.

▼ See next action for the other roles

#### Strategist / Innovator

Commission a market sizing and regulatory impact study on EU sovereign cloud requirements for the public sector.

#### Presales / Proposal

Prepare a solution brief and high-level architecture that showcases Orange's sovereign cloud partnership options and compliance capabilities.

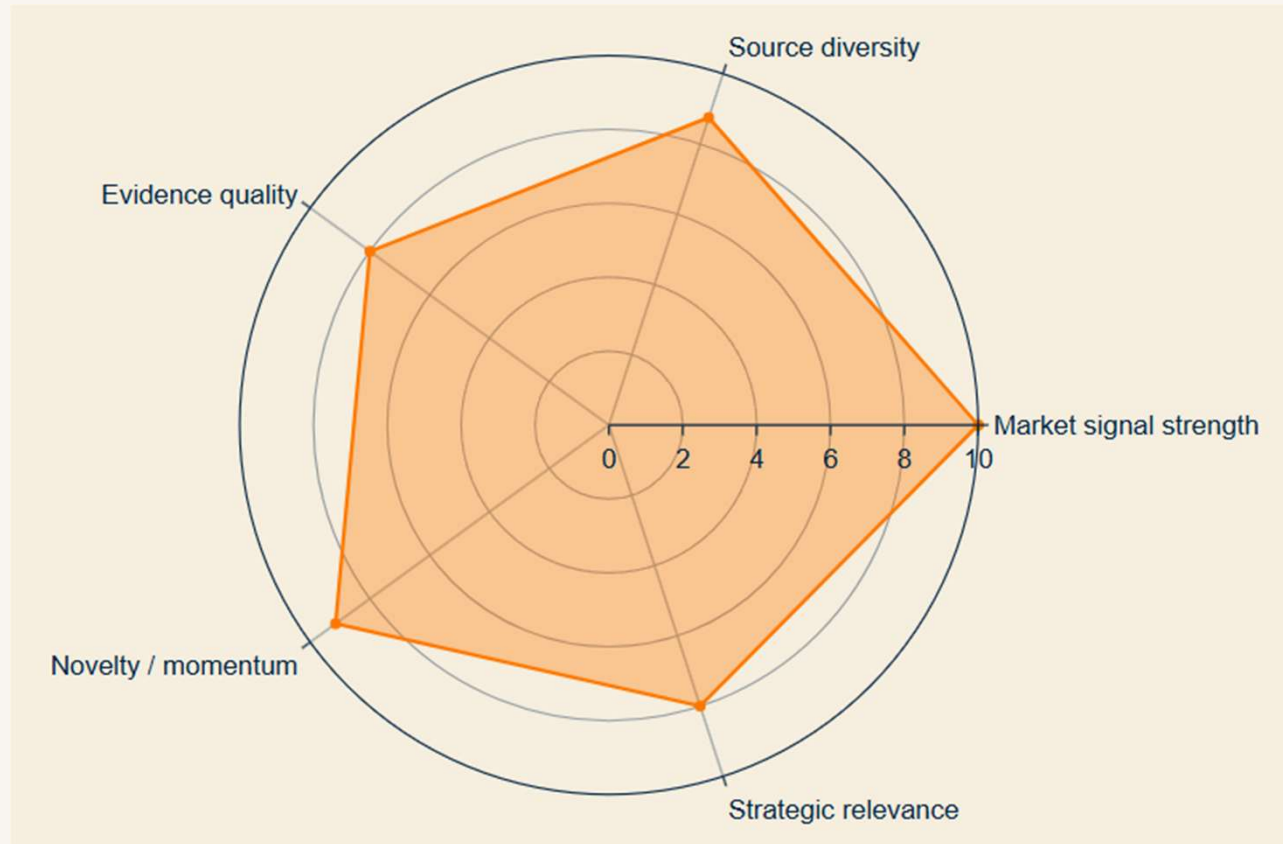

Role: **Sales**  
Vertical: **Public Sector**  
Persona: **CIOs**

### Top OS insights

**OS028**  
Best compromise

## Top OS insights

**OS028**  
Best compromise  
Attractiveness x R2W x Urgency

Strategic position ↔

**Right to Win**

★ Strong opportunity: high attractiveness and strong right-to-win.

# Limitations and next steps

## Deploy to cloud

Our project runs locally and updates a local db:  
could rather be 24/7 **available**, avoiding **data loss**, and **run** and **update** dashboard **automatically**.

## Improve streamlit dashboard

Add **more filters** and make it more dynamic.  
Use of **internal data** to adapt recommendations and surface the right Opportunity Spaces.

## Improve scoring

**Weights** used to compute the scores could be suitably **adjusted** as more data are available.

## Remove manual intervention

**Recalibration** when number of sign.  
**Approval** of new taxonomy.

Thank you for the attention
